Presentation Notes
Nina McGee

What I learned:

I have never coded more than one page of a website before this class so I learned a lot. I mostly learned how to correctly code grids and use CSS effectively to create the design I want.

What was challenging:

It was challenging to create the layout that I wanted. I learned how to create div tags to make a grid in order to make my layout more cohesive but it was challenging to get things the correct size I wanted. Also using java script was confusing for me but I learned how to do simple things like easing in my buttons when you hover over them.

What is the next step of this website:

Building out the flavors page to display more flavors and to promote their seasonal flavors. Also building out the events page more so that alerts are made when there are upcoming events. Lastly, making a FAQ page for all of the questions they get asked about where their ice cream is from, how to pronounce their name, ect.
